RESPONSE TO "WEBSITE REVIEW & DEVELOPER ACTION NOTES" · 31 OCT 2026

WEBSITE REVIEW RESPONSE & REMEDIATION REPORT

Item-by-item record of the changes made to the Summit Industrial Services website in response to the client review, the evidence for each, and the remaining owner and hosting actions required before public launch.

STATUS AT ISSUE

All developer actions in the review are complete and verified. Launch is now gated only by business-owner sign-off (copy, imagery and articles) and production hosting configuration. No code blockers remain.

15	9	5	1
Review items addressed (P0 to P2)	Complete and verified	Complete, awaiting owner approval	Requires hosting / domain action

Status key used in this report

COMPLETE	Developer action implemented and verified against the review's acceptance criteria.
OWNER APPROVAL	Developer action complete; the acceptance criteria also require the business owner's written approval.
HOSTING ACTION	Code is ready; completion depends on domain, DNS or server configuration.

How to read this report

Sections 02 to 04 answer every numbered item in the review (P0-01 to P2-03) in the same order and wording, with the actions taken, the verification performed and the acceptance status. Section 05 answers the page-by-page notes and the suggested replacement copy. Section 06 completes the review's pre-launch checklist as PASS or PENDING. The items that need the business owner's decision are summarised in the executive summary and marked "Owner approval" throughout.

01 EXECUTIVE SUMMARY

The review of 31 October 2026 recommended **"Conditional / do not launch as-is"** and listed four release blockers (P0), eight launch priorities (P1) and three refinement items (P2). Every developer action in that review has now been implemented, tested against the stated acceptance criteria and re-verified on a production build.

What has changed

- **Image provenance:** all images sourced from the unrelated US company (summit.us) were removed from the site and the database. They were replaced with licensed, clearly labelled illustrative photography matched to each service and sector.
- **Truthfulness:** the "1996" caption, the "We build the plants that build everything else" slogan and the "Direct hire" cue were removed. The home page now uses the review's suggested Pilbara access and rigging proposition word for word.
- **Projects renamed:** "Projects" is now **"Typical Work Scopes"** across navigation, URLs, cards, page titles and labels. Each page states that it is a capability illustration, not a completed client project.
- **Brand and conversion:** the approved red and gold logo is used across the site, favicon and social sharing card. The signed-off 2026 Capability Statement PDF is downloadable from Home, About, Capabilities, Contact, the menu and the footer.
- **Enquiries and privacy:**
  - The contact form now has server-side validation, spam protection and per-visitor rate limiting.
  - Error messages are accessible, and a dropped connection no longer loses what the visitor typed.
  - Email alerts were delivered for every enquiry type in testing.
  - The newsletter was removed and a privacy notice published.
- **Quality:** the site was tested at 360, 390, 768 and 1440 px.
  - Automated WCAG 2.2 AA checks: 104 issues found and resolved, leaving 0.
  - Also checked: keyboard use, reduced motion, 404 handling and mobile performance.

What is still required before launch

ACTION	DETAIL	RESPONSIBLE
Content and claim sign-off	Director approval of service claims, staff bios, article wording and bylines, and the work-scope wording (P0-04, P1-07).	Business owner
Image approval	Approve or replace each illustrative image, preferably with authentic Summit photography (see section 07). Two crane photos show a third-party "ACE" brand and need a decision.	Business owner
Brand approval	Confirm the logo treatment, colours and social sharing card (P1-01).	Business owner
Production domain	Confirm the company web domain. Configure DNS, HTTPS, environment settings, analytics, backups and monitoring (P1-06).	Owner + developer
Enquiry mailbox	Provide a Summit-owned sending mailbox (e.g. website@summit-is.com.au) so outgoing alerts carry no developer domain. Confirm support@ receives them after go-live.	Owner + developer

02 RELEASE BLOCKERS, P0

P0-01 Remove third-party imagery

COMPLETE · OWNER APPROVAL

ACTIONS TAKEN

- Audited every image reference in the site, the content database and page version history. All summit.us URLs were found and replaced, and the summit.us media records were deleted. A start-up safeguard swaps and removes any such record automatically, so they cannot be restored from history.
- Replaced them with 21 photographs licensed under the Pexels License (free for commercial use, no attribution required), selected to match each service and sector. Credits are kept in `images/stock/CREDITS.txt`.
- All replacement images are served from the website's own server, and every one is labelled. Alt text starts "Illustrative image: ..." and captions read "ILLUSTRATIVE IMAGE". No caption implies a real Summit site, client or date.
- Portraits taken from summit.us (another company's staff) were removed. Team profiles now show no photograph until approved portraits are supplied.

VERIFICATION

A crawl of all 20 public pages found 0 references to summit.us and 0 broken images. Every image on the site is served from the website's own server. Each industry panel shows a sector-matched image (Rail: freight wagons; Marine: port cranes; Utilities: water treatment; and so on).

Acceptance status: "No unlicensed images or references to summit.us remain" is **met**. "Owner approves every image" is **pending**; see the image register in section 07. Two crane images show a visible "ACE" brand and should be replaced or approved.

P0-02 Remove unsupported company-history cues

COMPLETE · OWNER APPROVAL

ACTIONS TAKEN

- Removed the "Early Summit fabrication yard in 1996" image and caption. The About page no longer contains a founding date or any history not stated in the capability statement.
- Replaced "We build the plants that build everything else" with *"Specialist access and rigging, Pilbara based."*
- Replaced "FIG. 01: DIRECT HIRE" with "ILLUSTRATIVE IMAGE".
- Experience is shown only as "50+ years combined industry experience across the team", as in the PDF. No company age is implied.

VERIFICATION

A text crawl of every rendered page found no matches for "1996", "plants that build" or "direct hire".

Acceptance status: content discrepancy resolved. Written approval of the remaining slogans and headings by the business owner is **pending**.

P0-03 Correct "Projects" representation

COMPLETE

ACTIONS TAKEN

- Renamed the section and page to **"Typical Work Scopes"** in navigation, menu, footer, page titles, cards, counters ("05 WORK SCOPES") and next/previous labels.
- The URL changed from `/projects` to `/work-scopes`. Old links permanently redirect (HTTP 301), so no bookmarks or search results break.
- Each scope is titled "... work scope". Its status line reads *"Typical work scope. Illustrates how our services can support a project; not an individual completed client project."*
- Every scope page carries a "Capability illustration" notice above the content. Gallery captions are prefixed "ILLUSTRATIVE IMAGE".
- The home section uses the review's suggested wording verbatim: *"Representative examples of how our services can support your project. These are capability illustrations, not individual completed client projects."*

Acceptance status: met. A visitor cannot reasonably mistake an illustrative profile for a completed Summit project. Real case studies can be added through the CMS once verified evidence and permissions exist.

P0-04 Obtain final content / claim sign-off

OWNER ACTION

DEVELOPER SUPPORT

- Retained the careful wording throughout:
  - "Engineering coordination with suitably qualified professionals"
  - "Engineered design ... verified by suitably qualified engineers where required"
  - "Working towards ISO accreditation"
- Removed implied field authorship: articles are bylined "Summit Industrial Services · Capability insights" (see P1-07).
- All copy is editable in the CMS admin panel. The director can amend wording during review without developer involvement, and every change is recorded in the page version history.

Acceptance status: pending owner. An approved copy list requires director review of: service claims, the four personnel descriptions, the six articles and their bylines, and the five work scopes.

03 LAUNCH PRIORITIES, P1

P1-01 Use approved brand identity

COMPLETE · OWNER APPROVAL

ACTIONS TAKEN

- The approved logo (red triangular symbol with the "SUMMIT" wordmark and gold "INDUSTRIAL SERVICES") is used in the header, mobile menu, footer and 404 page. It has an accessible name, "Summit Industrial Services home".
- The page-transition screen now shows the full red and gold "SUMMIT / INDUSTRIAL SERVICES" lockup instead of the ambiguous text-only "SUMMIT." mark.
- Site colours were re-sampled from the logo (brand red #D7262F, gold #C49A5C). Favicons are set at 16, 32, 192 and 512 px plus an Apple touch icon.
- A new 1200 × 630 social sharing card shows the logo, "Scaffolding, access, rigging & inspection" and Karratha · Pilbara WA.

Acceptance status: the full company name is clearly shown on desktop and mobile. Owner approval of the mark, colours and contrast is **pending**. Vector (SVG) logo files would improve sharpness on high-resolution screens if available.

P1-02 Add 2026 capability-statement download

COMPLETE

ACTIONS TAKEN

- Published the supplied PDF as `Summit-Industrial-Services-Capability-Statement-2026.pdf`. The checksum matches the supplied file exactly, so it is the same document.
- A labelled "Download 2026 Capability Statement" link with "PDF, 5 pages, 254 KB" appears:
  - in the home hero, above the fold, next to "Discuss Your Project", as the review suggested;
  - on the About, Capabilities (twice) and Contact pages;
  - in the overlay menu and the footer of every page.

Acceptance status: met. Retrievable in one click from every page. The download opens and saves correctly.

P1-03 Test and secure enquiry workflow

COMPLETE

ACTIONS TAKEN

- **Validation:** runs both in the browser and on the server. Name, email, phone, enquiry type and message are required, with email and phone format checks and length limits.
- **Anti-spam:** a hidden honeypot field rejects bots silently. Each visitor (by IP address) is limited to 5 enquiries per 10 minutes, with a friendly message that offers the phone number.
- **Accessible states:** every field has a visible label and a required marker. Success and error messages are announced to screen readers, and the button shows "Sending..." and is disabled while a submission is in progress.
- **Resilience:** enquiries are saved before the email is sent, so none are lost if email fails. Failures are logged for monitoring. If the connection drops mid-submit, the visitor's text is kept and they are offered the phone number.
- **Email routing:** each enquiry is emailed to the support mailbox with the enquiry type in the subject. Reply-To is set to the enquirer, so staff can answer directly from their inbox.
- **Privacy:** a data-use statement and a privacy notice link sit beside the submit button. File attachments are not accepted.

TEST RESULTS

- One end-to-end submission was sent for each of the 6 enquiry types, and all six alert emails were delivered to the inbox, not spam. Each had the correct subject and Reply-To.
- Invalid email and invalid phone were rejected with clear messages on a throttled 3G connection, and the visitor's input was kept.
- The keyboard-only tab order runs through the form in logical order.
- The rate limit was triggered in testing and showed the expected message.

Acceptance status: met on staging. Before launch, the sending address should be switched to a Summit-owned mailbox; this is a configuration change only. Test enquiries are marked "QA Test" and can be deleted in Admin → Contact.

P1-04 Make contact and service details reliable

COMPLETE

ACTIONS TAKEN

- Click-to-call uses `tel:0401174989` everywhere.
- **support@summit-is.com.au** is used for general enquiries. **Jason@summit-is.com.au** is shown as Jason Matakatea, Managing Director, for direct contact, as the review preferred.
- The Google Map is pinned to 1537 Pyramid Road, Karratha Industrial Estate WA 6714, with a "Get directions" link.
- The address, phone and ABN are identical in the header menu, footer, Contact page, privacy notice and structured data.

VERIFICATION

The link audit found exactly one phone number, two email addresses and one directions link across the site, all correct. There were 0 broken internal links (20 checked).

Acceptance status: met. The owner should confirm both inboxes are monitored.

P1-05 Fix opt-in and privacy disclosures

COMPLETE

ACTIONS TAKEN

- Removed the footer "Field Notes" newsletter and its "project milestones and hiring calls" promise. The review offered either removing it or building proper opt-in; it was removed because no subscription programme is run.
- The footer now has a "Get in touch" column with direct contact details, as the review suggested.
- Published a privacy notice at `/privacy` aligned with the Australian Privacy Principles. It covers what is collected, purpose, access, retention, security, access and correction rights, and the OAIC complaint route. It is linked from every footer and from the contact form.

Acceptance status: met. No email addresses are collected for marketing. The privacy notice should be reviewed by the owner (or their adviser) as part of sign-off.

P1-06 Prepare production-domain launch

HOSTING ACTION

READY IN CODE

- Canonical URLs, sitemap, social metadata and structured data are generated from a single production-address setting, currently `https://www.summit-is.com.au`, subject to confirmation.
- Any other host (including the staging site) automatically returns `robots.txt: Disallow /`, an `X-Robots-Tag: noindex` header and noindex meta tags, so staging cannot be indexed.
- Old `/projects` URLs redirect permanently. There are no staging references in navigation or page metadata.

REQUIRED

- Confirm the company-approved web domain. The capability statement only establishes summit-is.com.au for email.
- Point DNS to the server, issue an HTTPS certificate, and set the production environment values (site URL and email settings).
- Enable analytics, scheduled database backups and uptime monitoring. Configure the reverse proxy to pass the visitor IP so per-visitor rate limiting works.

Acceptance status: pending domain confirmation and hosting access.

P1-07 Review articles and author claims

COMPLETE · OWNER APPROVAL

ACTIONS TAKEN

- Removed "Notes from the field" and "Insights from our crews, engineers and project teams". The section is now titled "Capability notes, by topic" and presented as general information.
- All six articles are bylined "Summit Industrial Services · Capability insights". No article is attributed to an individual or presented as a site observation.
- Each article ends with a call to action linking to the relevant service on the Capabilities page, plus "Discuss your project".

Acceptance status: developer changes are complete. Business-expert approval of each article's content, dates and terminology is **pending**.

P1-08 Keep accreditation and engineering wording precise

COMPLETE

ACTIONS TAKEN

- ISO is shown only as "Working towards ISO accreditation", on Home, About and the Contact FAQ. It never appears as achieved or certified.
- Engineering is described as "coordination" everywhere. The short headline now reads "Engineering coordination, where required", and the "Engineer verification" item adds "where engineered design is required".

VERIFICATION

A crawl of every rendered page found 0 instances of "ISO certified", "accredited" or "in-house engineer". All engineering references include "suitably qualified" or "where required".

Acceptance status: met. The operations manager may wish to review the compliance wording as part of sign-off.

04 CONTENT AND TECHNICAL POLISH, P2

P2-01 Correct captions, spelling and copy polish

COMPLETE

ACTIONS TAKEN

- Removed the "Pilbara Marine Terminal tank farm" caption and its summit.us photograph. No caption names a real site.
- Replaced the deep-excavation photo on the Rail panel with rail freight imagery, and audited every sector photo for relevance.
- Australian English is used throughout ("Specialised" and similar). The duplicated home safety slogan was removed.
- "One plan, from start to finish" was visually checked. The words sit on two separate lines, so the missing space was an artefact of HTML text extraction, not a display defect.

Acceptance status: met.

P2-02 Improve SEO and metadata

COMPLETE

ACTIONS TAKEN

- Each page has its own plain-language title and description naming the service and Karratha or Pilbara. The Contact title is now "Contact Us | Summit Industrial Services, Karratha WA"; "Built at Industrial Scale" was removed.
- There is exactly one H1 per page, verified on all public pages.
- Structured data (GeneralContractor) uses only verified details: legal name, logo, ABN, address, phone and service area.
- Canonical URLs are set. The XML sitemap has 19 URLs, including Work Scopes and Privacy.
- Every image has descriptive alt text. Social sharing images are set per page, with the branded card as the default.

Acceptance status: met. All 20 crawled pages had unique titles and descriptions, and staging is excluded from indexing.

P2-03 Mobile, accessibility, performance and resilience

COMPLETE

METHOD

Automated browser testing (Chromium with axe-core 4.10) on the production build, covering 10 representative pages plus the 404 page at 360, 390, 768 and 1440 px, in light and dark themes. A throttled mobile profile was used for performance.

0 WCAG 2.2 AA violations (from 104 found and fixed)	**0** Horizontal-scroll or clipped-heading issues at 4 widths	**~1.0 s** Largest content paint, throttled mobile (home)	**0** Layout shift (CLS) on Home, Capabilities, Contact

FIXES MADE

- **Contrast:** 104 small-text failures fixed. Grey and red label text was darkened to the minimum that meets 4.5:1, theme by theme, with no change to the overall look. White text is now used on red buttons.
- **Touch targets:** footer, contact and section links enlarged to at least 24 px (WCAG 2.5.8).
- **Reduced motion:** the hero zoom and pulsing graphics now stop when the visitor has reduced motion turned on.
- **Images:** responsive 480 px and 960 px versions mean phones no longer download 1600 px photos for small cards. Below-the-fold images lazy-load.
- **Resilience:** a form submitted over a lost connection keeps the visitor's text instead of showing an error page. A friendly 404 page (HTTP 404, noindex) links back to key pages. Filter buttons announce their selected state.

ALSO VERIFIED

Visible focus on every keyboard stop. The mobile menu opens from the keyboard and closes with Escape. FAQ accordions, filters and next/previous links work. 0 console errors, 0 failed requests. Taps respond in about 30 ms.

Acceptance status: met for automated and keyboard QA. A short manual check on a physical iPhone and Android device, and a basic screen-reader pass, are recommended at launch (section 06).

05 PAGE-BY-PAGE RESPONSE

Response to section 05 of the review ("Page-by-page notes for the developer").

PAGE	REVIEW: CHANGE OR VERIFY	RESPONSE	STATUS
Home	Swap images; replace plant-building and direct-hire copy; add capability PDF CTA; clarify illustrative portfolio; check repeated safety line.	Stock images replaced with labelled illustrative photography. The review's suggested hero, supporting paragraph and two primary actions were adopted verbatim. The section is now "Typical Work Scopes" with a disclaimer. The duplicate slogan and the unrelated hero video were removed.	COMPLETE
About	Remove the 1996 borrowed-image cue; use approved local visuals and brand; confirm map and ISO copy.	The 1996 image and caption were removed. Captions say "Illustrative image" and summit.us portraits were removed. The map is pinned to 1537 Pyramid Road. ISO reads "working towards". The capability PDF link was added.	OWNER APPROVAL
Capabilities	Replace off-brand stock; clarify engineering coordination; fix the irrelevant inspection illustration.	Every service has a matched image (inspection now shows a height-safety harness). The headline reads "Engineering coordination, where required". PDF links are in the hero and the red band.	COMPLETE
Projects / detail	Rename representative scopes; avoid "05 projects"; get real cases later.	Renamed to Typical Work Scopes and /work-scopes (301 from /projects). The counter reads "05 WORK SCOPES". Each page has a status line and an illustration notice. The structure is ready for real case studies.	COMPLETE
Industries	Photo-to-sector relevance, captions, Australian spelling, Rail imagery.	All six sector images were re-matched (Rail: freight wagons). "Specialised" corrected. "Related work scopes" only appears where scopes exist.	COMPLETE
Insights	Verify expertise, bylines, dates, approval, image rights and business need.	Reframed as "Capability notes", bylined to the company, with a service call to action on each article. Images are licensed and labelled. Content approval rests with the owner.	OWNER APPROVAL

PAGE	REVIEW: CHANGE OR VERIFY	RESPONSE	STATUS
Contact	Form test; map and email links; spam and validation; privacy disclosure; confirm destination.	Full end-to-end test passed for all 6 enquiry types. Validation, honeypot and rate limit added. Privacy note and link added. Phone and email are click-to-call and click-to-email; Jason has a direct-contact block. Map and directions verified.	COMPLETE
Footer / all pages	Approved logo, PDF link, privacy link, opt-in purpose, real production domain.	Logo, PDF link, privacy link and contact column added. The newsletter was removed. Canonical domain is configured but awaits confirmation.	HOSTING ACTION

Suggested replacement copy: adoption

ELEMENT	COPY NOW LIVE ON THE SITE	STATUS
Home hero	"Pilbara-based scaffolding, access, rigging and inspection."	VERBATIM
Supporting paragraph	"Summit Industrial Services supports shutdown, maintenance, construction and marine projects across the Greater Pilbara through practical access solutions, rigging, inspection, engineering coordination and materials support."	VERBATIM
Primary actions	"Discuss Your Project" | "Download 2026 Capability Statement"	VERBATIM
Project section	"Typical Work Scopes": "Representative examples of how our services can support your project. These are capability illustrations, not individual completed client projects."	VERBATIM
ISO	"Working towards ISO accreditation as part of our commitment to strengthening safety, quality and continuous improvement systems."	ADOPTED

06 PRE-LAUNCH QA AND SIGN-OFF CHECKLIST

Completed against section 06 of the review. As the review requested, each check is marked PASS or PENDING, with evidence and the person responsible.

AREA	ACCEPTANCE TEST	RESULT	EVIDENCE	RESPONSIBLE
Business owner	Approves service claims, four staff bios, ABN and contact details, project wording and every public photo.	PENDING	Approval list in section 01; image register in section 07.	Owner
Design / content	Approved brand everywhere; no summit.us media, 1996 cue, US captions or direct-hire claims.	PASS	Crawl of 20 pages: 0 matches for any flagged term or domain. Logo on all layouts.	Developer
Portfolio / content	Projects named honestly as capability examples.	PASS	Renamed to Typical Work Scopes with status lines, notices and 301 redirects.	Developer
UX / content	Capability PDF linked from Home, Capabilities and footer; opens correctly.	PASS	Linked from 7 locations. Checksum identical to the supplied PDF. Returns HTTP 200.	Developer
Forms / email	Test each enquiry type; valid and invalid fields; attachment policy; success and fail messages; mailbox and spam handling.	PASS	6 of 6 types delivered to the inbox, not spam. Invalid input rejected. No attachments accepted, by policy. Offline and rate-limit messages verified.	Developer
Privacy / security	Contact data use transparent; newsletter disabled or consent verified.	PASS	Newsletter removed. Privacy notice published and linked. Honeypot and rate limiting active.	Developer
Navigation	All links, tel/mailto, maps, filters, FAQ accordions, next/previous, blog pages and 404 tested.	PASS	20 internal links: 0 broken. Filters, FAQs and next/previous links work. 404 returns HTTP 404 with recovery links.	Developer
Accessibility	Keyboard, screen-reader basics, labels, input errors, focus, contrast, reduced motion.	PASS	axe-core WCAG 2.2 AA: 0 violations (light and dark). Visible focus everywhere. Labelled fields. Announced errors. Reduced motion respected.	Developer

AREA	ACCEPTANCE TEST	RESULT	EVIDENCE	RESPONSIBLE
Responsive	Small phones, tablet, laptop, desktop: nav, form, CTA, image cropping.	PASS	360, 390, 768 and 1440 px: 0 overflow, 0 clipped headings. Physical-device spot check recommended at launch.	Developer
Performance	Optimised, lazy-loaded imagery; real mobile performance; JS, console and network errors.	PASS	Responsive images and lazy loading. Throttled-mobile load about 1.0 s, CLS 0. 0 console errors, 0 failed requests.	Developer
Production	Approved domain, HTTPS, staging index policy, canonicals, sitemap, backup, analytics, monitoring, redirects.	PENDING	Staging noindex, canonicals, sitemap and redirects ready. Domain, HTTPS, analytics, backups and monitoring await hosting access.	Owner + developer
Final sign-off	Owner and developer record launch approval, date, changes and rollback plan.	PENDING	To be recorded at launch. Rollback plan: the previous release (commit 512f3aa) stays redeployable, and a database backup is taken immediately before go-live.	Owner + developer

Suggested order of work (review section 06): steps 1 to 5 are complete (image provenance; projects and claims; logo, PDF and contact workflow; privacy and newsletter decision; mobile, accessibility and SEO QA). Step 6, owner sign-off and production release, is the only remaining step.

07 PHOTOGRAPHY BRIEF AND IMAGE REGISTER

Response to Visual 5 ("Required photo brief"). The illustrative images are a compliant interim measure. Authentic Summit photography will be stronger evidence for clients, and each image below can be swapped in the CMS without developer work.

Requested authentic photographs (six categories)

#	CATEGORY	SUGGESTED SUBJECTS	REPLACES ON SITE
1	**Scaffolding and access**	Tube & fit and Ringlock structures erected by Summit crews; tagged scaffold; crew on deck.	Home hero, Capabilities 01, scaffolding work scope
2	**Rigging and lifting**	Rigging set-ups, lifting operations, Summit-operated equipment (no third-party branding).	Capabilities 03, rigging work scope
3	**Inspection and compliance**	Scaffold tag inspections, harness and height-safety equipment checks, pre-start meetings.	Capabilities 04, Insights covers
4	**Shutdown and maintenance**	Plant shutdown access (with client permission), maintenance teams at work.	Capabilities 05, shutdown work scope
5	**Yard, fleet and logistics**	The Karratha yard at 1537 Pyramid Road, Summit vehicles, materials staging.	About narrative, Capabilities 06
6	**People**	Approved portraits of the four named personnel; team or crew photographs.	About leadership profiles

For each asset: owner permission, photo credit if required, a genuine project or sector description, and confirmation that client and site restrictions allow publication. Faces of non-staff and client branding should be avoided or cleared.

Current illustrative image register

All images are licensed under the Pexels License (commercial use permitted, attribution not required). They are hosted on the website's own server and labelled "Illustrative image" in alt text and captions. Full source credits: `/images/stock/CREDITS.txt`.

IMAGE (FILE)	USED FOR	OWNER DECISION
scaffold-crew-deck, scaffold-tower-crew	Home hero and manifesto; scaffolding article covers	Approve / replace
scaffold-access-worker, scaffold-design-cad, structural-access-frames	Capabilities 01 and 02; work-scope heroes	Approve / replace
mobile-crane-outriggers, pick-and-carry-crane	Rigging capability and work scope. **Shows a visible third-party "ACE" brand.**	**Replace recommended**
work-at-height-harness	Inspection, tagging and compliance; safety article	Approve / replace
plant-maintenance-conveyor, shutdown-process-facility	Shutdown and maintenance capability and work scope	Approve / replace

IMAGE (FILE)	USED FOR	OWNER DECISION
low-loader-transport, road-train-logistics	Logistics capability; About narrative; logistics article	Approve / replace
site-planning-engineers	About narrative; project-planning article	Approve / replace
energy-process-plant, resources-haul-truck, utilities-water-treatment, renewables-offshore-wind, rail-freight-wagons, marine-port-cranes	Industries: one sector-matched image each	Approve / replace
marine-wharf-cranes, renewables-platform-crew	Marine and renewables work scopes	Approve / replace
